A. PERSONAL STATEMENT

I have developed and tailored my research program to provide evidence to inform both treatment and management for individuals affected by osteoarthritis. I have extensive experience in pre-clinical models of joint injury and osteoarthritis (biology and biomechanics), clinical research in osteoarthritis management and joint replacement (exercise programming, wearable technology, and interview/diagnostic tools), conducting patient-oriented research projects, translating knowledge, collaborating on large multi-site trials, synthesizing evidence, and training in orthopaedic surgery. I have developed expertise in different study designs (reviews, observational, and experimental), research methods (quantitative and qualitative), and statistical techniques. I am becoming an internationally recognized researcher in the field of joint injury and osteoarthritis management. As a trained scientist with global collaborations, I have delivered 80 presentations, have 28 manuscripts, published 33 peer-reviewed abstracts, and have secured \$450,000+ operating grants and nearly \$900,000+ individual research scholarships and awards. Further, during my academic training, I identified a gap in services and started my own consulting company *Joint Management* developing individualized exercise programs for osteoarthritis patients. This company has expanded to the first free, evidenced-based website in Canada for patient education and exercise programming for mild to moderate hip and knee osteoarthritis (www.jointmanagement.ca).
